

IVF module

Client:

The client is an in vitro fertilization (IVF) center in Limassol, Cyprus.

Need:

To maintain the IVF patients' data, treatment processing, analysis, and result management through a single point solution

Challenge:

- Recording the patient details, tracking down the patients and coordinating the clinical process was complex.
- No solution in place to enter the patient IVF details.

Solution:

Evangelsoft provided the client with an IVF module for complete IVF cycle monitoring. The module included all the In vitro Fertilization requirements and functionalities including IVF attempt, Lab Reports, Intrauterine Insemination (IUI), and other features. The solution assisted in data maintenance at various stages of IVF procedure and also provided other advanced features like round cell count, follicular tracking, recovery percentage etc. This module was a one-stop solution for the client that helped in managing the entire process of the IVF clinic resulting in increased staff efficiency and improved productivity.

Benefits:

- Covers all areas of in vitro fertilization
- Availability of complete statistical reports
- Easy processing of IVF procedure
- Different IVF criteria entered and visualized in the same screen
- Improved IVF information management to achieve the best results
